**SUBJECT: Motivation Letter For M. Sc. Computer Science**

Respected Sir/Madam,

I am pursuing the postgraduate degree program **Master of Science in Computer Science** at your esteemed university. I am hoping to gain enhancement of my knowledge and skills under the guidance of your institute and further preparing me for a successful career in the field of computer science.

My preference toward your program comes from the your well structured curriculum. I was very impressed by the track structure that the institute presents for the given program. I was more attracted towards the open track where I believe that I can study the mix of two other important path of computer science the Systems track and the Algorithm track. In addition, the special emphasis on methodological and research skills along with a very practical oriented Computer Science Lab has only reinforced my desire to apply for this program.

As per my background of being Bachelors in Information Technology (BIT) graduate, I have studied several of the important subjects like Data structures and Algorithms, System Analysis and Design, Software Engineering, Software Project Management, Artificial Intelligence etc. which has given me a comprehensive knowledge and strong foundation. Even though I was an average student academically, my communication skills and sense of responsibility helped me earn the role of class representative during my studies. Furthermore, in my final year project, I developed a Courier Management System where I worked with algorithms and real-time database updates. Although the project was simple in design, it was elegant, practical, and helped me strengthen my problem-solving and development skills.

In addition to my academic background, I have also I have also gained professional experience by working with different companies in real-world environments, worked with several companies and clients. During this time, I participated in developing and contributing several related projects such as web applications, websites, APIs, etc. Working on these projects helped me improve my practical skills, understand industry standards, and strengthen my passion for learning more advanced knowledge in the field of computer science and technology. Thus, gaining research skills, advanced algorithmic thinking and a deeper understanding of international large-scale system requirements, which this master's degree program promises to offer ,would further enhance my abilities and professional growth, adding even greater value to my academic and practical experience.

For someone like me aiming to prosper in the field of science and technology, Germany has been a global leader for delivering a profound and innovative education. The state-of-the-art IT institutes like Hasso Plattner Institute remain unmatched for its reputation, and excellent research and teaching in the field of computer science. I was also inspired by the Moreover, being part of such institute will be a add-on-value to my professional career.

Computer science is not only my profession but also has been my passion, and I genuinely want to excel in this field. I consider myself as a highly motivated and responsible individual who is eager to grow both academically and professionally. I believe that giving me the

opportunity to study at your university would align well with your mission statement of achieving a responsible and forward-looking digital solutions. I promise to contribute positively to the technology industry in the future through my knowledge, skills, and professional ethics.

Thank you for considering my application. I look forward to the opportunity to study at your esteemed university and become a valuable part of your academic community.

Sincerely,  
Leezan Dawadi
